Yozma.Tech

Task 1

Write a plugin (change in product price).

Necessary environment: standard Woocommerce store with demo products.

Description of the functional: on the plugin page there is a field for entering the product ID and a field for entering price. After filling in the data, when clicking on the Submit button, execute an ajax function and change the price of the product. Insert the Ajax response on the plugin page with checks: if the function worked successfully, we notice that the price of the product with this ID was changed from this to this. If there is no product with such ID in the database, return the response that such a product was not found.

The result of this test: zip archive with the plugin.

Task 2

Write a function that adds the "LASTNAME" column to the USERS page (in the administrative panel) and implement sorting by this column.

Test Result: functions.php file with function
